

The scatter plot displays a series of black data points on a light gray grid. The points follow a clear downward trend from left to right. Superimposed on this trend is a high-frequency oscillation, creating a 'fuzzy' or 'noisy' appearance. The data is most concentrated in the lower-left region, where the points are tightly packed, and becomes more sparse as it moves towards the upper-right. There are also a few isolated points at the bottom left of the plot area.
